

**WHAT IS CLAIMED IS:**

*Subh  
AI*

Use of a compound represented by the following formula (I) as an agent for prevention and treatment of arthritis, osteoporosis and ruptured disc:

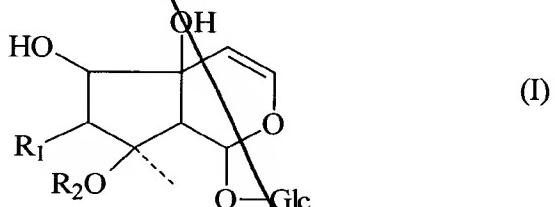

in which

R<sub>1</sub> represents hydrogen atom or alkyl group; and

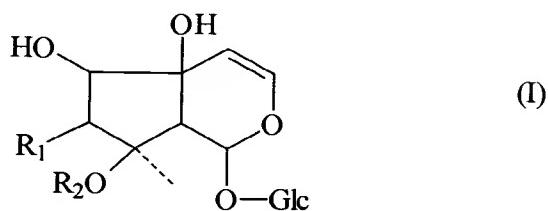

R<sub>2</sub> represents hydrogen atom or cinnamoyl group.

- 10 2. A pharmaceutical preparation containing as an effective component a compound represented by the following formula (I):

in which R<sub>1</sub> represents hydrogen atom or alkyl group and R<sub>2</sub> represents hydrogen atom or cinnamoyl group, in combination with a pharmaceutically acceptable auxiliary, diluent, isotonic agent, preservative, lubricant and solubilizing aid, which is formulated in the form of a pharmaceutically acceptable preparation and has a potent effect for osteoporosis, arthritis and ruptured disc.

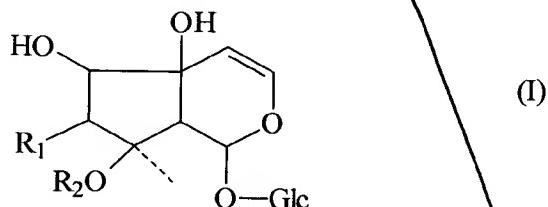

3. A pharmaceutical preparation containing as an effective component a compound represented by the following formula (I):

in which R<sub>1</sub> represents hydrogen atom or alkyl group and R<sub>2</sub> represents hydrogen atom

5 or cinnamoyl group, and one more materials selected from the group consisting of allendrate, tamoxifen, vitamin D<sub>3</sub>, parathyroid hormone (PTH), sulfasalazine, thioredoxin reductase, alendronate, raloxifene, calcitonin, estradiol, genistein, 1,25-dihydroxyvitamin D<sub>3</sub>, estrogen receptor modulator, biphosphonates, shinbarometin (novel material developed by the present inventors) and shinbarometin acetate (novel 10 material developed by the present inventors), in combination with a pharmaceutically acceptable auxiliary, diluent, isotonic agent, preservative, lubricant and solubilizing aid, which is formulated in the form of a pharmaceutically acceptable preparation and has a potent effect for osteoporosis, arthritis and ruptured disc.

- 15 4. A process for preparing a compound of formula (I) wherein R<sub>2</sub> is hydrogen atom, which has a more potent pharmacological activity, characterized in that a compound of formula (I) wherein R<sub>2</sub> is cinnamoyl is hydrolyzed:

in which R<sub>1</sub> represents hydrogen atom or alkyl group and R<sub>2</sub> represents hydrogen atom or cinnamoyl group.
